- **Financial:** Budgeting, Accounting & Services
- **Logistics:** Accountability, Distribution, & Maintenance Management
- **Health:** Program Assessment, Survey Design & Analysis, Program Monitoring, Trend Analysis ++
- **Services:** Association & Special Interest and Help Desk Support

PUBLIC HEALTH INFORMATICS

Technology support in evaluating, implementing, and managing health care services. We bring expertise in

- health care operations
- program monitoring and assessment
- survey design and management
- trend analysis & forecasting
- Database design and content management
- Local or world-wide interactive website design and management

International Resources

World-wide services include the United States, Africa, Asia, Europe, and Latin America.

Research Monitoring and Evaluation

Evaluation of current programs to provide valid, reliable, and relevant evidence for improving public health programs. ACC collects data that enables stakeholders to

- plan programs
- track performance indicators
- identify program strengths and weaknesses
- determine if strategies need adjustment
- advocate for appropriate resource allocations
- advance public health policies

Strategic Planning in Health Care

Proven expertise in strategic planning to help institutions meet today's public health challenges by preparing for the future, rather than reacting to short-term needs.

THE ORGANIZATION & ITS GOALS COME FIRST!

Strategic change reflects

- Changing technological developments
- Continuing evolution of technological innovation that bring organizations closer together
- Expansion of world governments and commercial boundaries and increased understanding of changing processes

ACC focuses on four strategies for analysis:

- ♦ **Organizational** - designing organizations so that their cultures, people, processes, and IT are aligned to create maximum efficiency within the contexts of their markets and societies.
- ♦ **Resource Allocation** - understanding an organization's core competencies and applying the appropriate structures— often in a political environment.
- ♦ **Operations** - developing a model that promotes the organization's mission. This takes into account existing resources and how they can be used to add value.
- ♦ **IT** - integrating technology into all strategies to create value, taking into account time, staff, and monetary constraints.
